

NOW is the time to make a plan to address pre-existing math gaps in Fall 2020

The Spring 2020 school closures and virtual learning across the US will result in many students having severe instructional gaps in previous grade level mathematics learning. The i-NTNmath program is designed to help you address this exact issue, while easily providing continuous data that is:

- **Real time**
- **Easy to interpret**
- **Standards-based**
- **Exposing student misconceptions**

Introducing i-NTNmath

The i-NTNmath program is an all-inclusive assessment program that measures student performance on skills and knowledge of state-specific math standards. The program provides teachers the ability to easily create and evaluate standards-aligned assessments that can be used as formative or summative assessment tools.

Benefits	Features
User-friendly	Intuitive steps and clear instructions on how to generate assessments and data reports
Time-Saving	Grade scan feature, with options to provide individualized feedback to students.
Easily Accessible	Online or paper-based assessment options, available in English and Spanish
Real-time Data	Multiple reports with options to review data in various forms
Quality Assurance	Created by former educators, rather than computer programmers
Data-based decision making	Multiple data reports, providing valuable insight to teachers and school leaders

It is critical that teachers have the tools to easily and efficiently identify individual student gaps.

With i-NTNmath, teachers can be up and running quickly and easily.

Getting Started

Our i-NTNmath program development team incorporated partner feedback to make both the system and onboarding as easy as possible. Teachers no longer need to create their own assessment questions, find high-quality assessment questions, or score the assessments. The program does it all for them.

At the point of sale for a school or district, the employee(s) on our end can set aside licenses for each user to grant access to the system without the difficulties that other systems have. Teachers can be up and running on this in a matter of hours.

Call us today at (855) NTN-MATH to talk about how i-NTNmath can partner with you to help your district, schools, teachers, and students have a successful math transition in the Fall and beyond. We have flexible solutions starting at just \$9 a student to fit every need.

About NTN Math

For over 25 years, the National Training Network (NTN) has specialized in providing professional development, coaching, written math curriculum, and assessments. As former educators, the NTN team is made up of people that understand the needs of teachers and students.

Timeline

Summer 2020

Purchase i-NTNmath by **July 31, 2020** to be ready for school-wide use by August 2020

Fall 2020

Pre-assess all students returning for fall 2020

Use as often as desired all year long
